TITLE : BROADCASTING DEVICE

ABSTRACT : PROBLEM TO BE SOLVED: To provide a broadcasting device which performs editing such as special effects of video and audio signals and cutting of a specific scene in real time and selects optional broadcasting delay time to perform these editing.

SOLUTION: This device is provided with a recording medium 4 which is randomly accessible, records video and audio signals from a television camera in real time and reads and edits recorded video and audio signal data from an optional position through a computer program, a special effect device 10 for video and audio signals and an editing control device 11 which controls both the medium 4 and the device 10. In this case, editing through the computer program and editing through the device 10 are performed in real time by outputting signals of video and audio signal data in an optional position which are stored in the medium 4 to the device 10.
